

All around security, safety and comfort. Custom built for your home

Give your home and family the best all around protection and comfort with Havengard's patented escape screens.

Havengard® escape screens add an extra level of safety for your family, by providing an internal keyless release to allow for easy exit in case of emergencies such as household fires.

Every Havengard® escape screen system is custom designed to meet your needs and includes Havengard's unique 'Grip Lock' technology for all around protection.

A Havengard® home is not only more secure it is more comfortable. Havengard® escape screens allow you to let the cooling breeze in whilst keeping intruders, insects and heat out.

Havengard® escape screens can be applied to any window brand, are available in a wide array of colours and can be fitted to timber or aluminium windows.

ALL AROUND SECURITY PLUS

Havengard® screens can also provide a wide range of additional benefits:

Fire resistance against flying embers up to and including BAL 40

Cyclone and storm protection against flying debris

Prevent insects and other pests entering your home

Prevent falls from balconies and windows

ALL AROUND STRENGTH WITH GRIPLOCK

All Havengard® escape screens feature the patented 'Grip Lock' mesh retaining system. 'Grip Lock' folds and hooks the stainless steel security mesh continuously all around the window or door frame. This unique continuous extra strong interaction between the mesh and the frame means the stainless steel mesh will not pull out of the frame even after a prolonged attack.

No other system includes this technology.

Havengard® is tested at the NATA certified facility Azuma to AS5039-2008 and has passed the following tests

Jemmy Test

Dynamic Impact Test

Knife Shear Test

Extreme Salt Spray Test
